

# DM Sync Manager for eDOCS DM

Automated synchronization from MS Active Directory to eDOCS DM Users and Groups. Simplify admin workflows and save time!

## Fast and lean administration

Creating and maintaining users in eDOCS is a time-consuming task. DM Sync Manager for eDOCS is a synchronization tool between AD and DM. Easy to install and manage. All settings in the AD accounts and groups are reflected in the Groups and People settings of eDOCS DM.

A wizard will guide you through the configuration options:

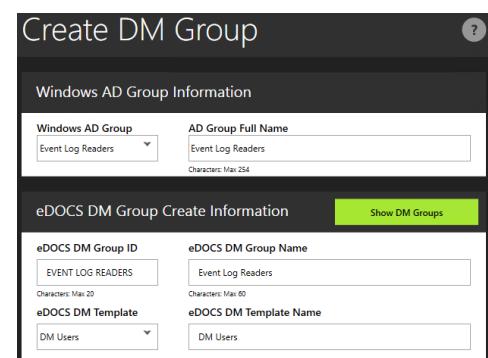

- Create, change, disable or lock user accounts.
- Create DM groups directly from the DM Sync Manager GUI.
- Name changes if users get a new surname for instance.
- Account information transfers from AD to the eDOCS people table, supporting standard or custom fields.
- Groups and Individual priority setup options.
- Service based scheduled refresh each active sync set.
- Multiple DM Library support.
- Nested AD Groups sync option.

## Create multiple sync sets

DM Sync Manager offers the option of setting up multiple sync sets with different elements/accounts according to request.

## Create DM groups from GUI

Create new DM groups directly via DM Sync Manager. When all fields are filled out, a group sync mapping between the selected AD group and the new DM group will take place.

## Change Log

All changes will be logged in the database with Date and Time stamp. This includes new users and groups, users' membership in groups, and disabled users.

## DM Sync Manager for eDOCS DM - Active Directory alignment makes your eDOCS DM administration fast, lean and more accurate.

### From installation to production

The process from installation to use can be accomplished quickly.

#### 1. Install and planning

It is easy to install the software by using the MS Windows Installer program. It provides a system settings check and prompts you for information.

#### 2. Setup and configuration

The configuration wizard will guide you in the setup of your sync sets. In a short while you are ready to run the automated synchronization process.

#### 3. Auto sync or Forced sync

The frequency you want to synchronize AD and eDOCS can be set from short to long according to your plan.

You can always run a forced sync in order to make the impact instantly after changes have been made.

### A word from two users:

*“With DM Sync Manager I save at least 2 hours every week. This is a very lean tool, linking the System Admins through DM Sync Manager directly to the DM Security System. If there is delay time or you forget to disable a person - that is done automatically. I no longer have to worry about when people leave, that they are disabled and disconnected to our business-critical information. It's like driving a car after you have been riding a bike for many years!”*

Sten, eDOCS DM  
System admin

*“DM Sync Manager saves me a lot of work and problems as we are always aligned with the AD.”*

Sven, eDOCS DM  
System Manager
